ABSTRACT:

The invention relates to a device for electric heating by radiation and in particular by Infrared radiation, composed of a relatively flat casing 1, comprising a radiation-emitting front face 10, a reflecting rear face 11 essentially parallel to the front face, as well as side faces 12, an electric resistor 2 placed inside the casing 1 and a thermal insulator 4, 4' filling the interior part of the latter.

This device is characterised in that it comprises a casing 1 made of a synthetic material whose front face 10 is intimately joined to the electrical resistor 2.
